discusses the research and theory concerning the physical surroundings that affect people in offices and factories

the inception of this volume can be traced to a series of environmental psychology colloquia presented at the university of california irvine during the spring of 1974 these colloquia were held in conjunction with social ecology 252 a graduate seminar on man and the environment although the eight colloquia covered a wide range of topics and exemplified a

diversity of research techniques they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research the apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior a representation of its major concerns and an analysis of its conceptual and empirical trends thus expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology

fundamentals of the physical environment has established itself as a well respected core introductory book for students of physical geography and the environmental sciences taking a systems approach it demonstrates how the various factors operating at earth's surface can and do interact and how landscape can be used to decipher them the nature of the earth its atmosphere and its oceans the main processes of geomorphology and key elements of ecosystems are also all explained the final section on specific environments usefully sets in context the physical processes and human impacts this fourth edition has been extensively revised to incorporate current thinking and knowledge and includes a new section on the history and study of physical geography an updated and strengthened chapter on climate change 9 and a strengthened section on the work of the wind a revised chapter 15 on cryosphere systems glaciers ice and permafrost a new chapter 23 on the principles of environmental reconstruction a new joint chapter 24 on polar and alpine environments a key new joint chapter 28 on current environmental change and future environments new material on the earth system and cycling of carbon and nutrients themed boxes highlighting processes systems applications new developments and human impacts a support website at [routledge.com/textbooks/9780415395168](http://routledge.com/textbooks/9780415395168) with discussion and essay questions chapter summaries and extended case studies clearly written well structured and with over 450 informative colour diagrams and 150 colour photographs this text provides students with the necessary grounding in fundamental processes whilst linking these to their impact on human society and their application to the science of the environment
